When searching activities you get all public matches and the home screen will show any you starred or created yourself.

Starred activities are manually sortable.

Non-starred activities will show have/have-not lists based of anything in inventory associated with the same 'tag-name' of an activity item.

Adding inventory equates to giving it a title and a photo.

You can fork activities from the community and customize title, description, and item lists.

Slider at the bottom of inventory list can adjust display size of items.
